## 2. Specifications of Kenter Shackle

Materials:  
CM490/CM690  
Grade: U2/U3

### Key Features:

Made from heavy duty forged steel  
Used to join two anchor chains together  
Used in the marine industry to join together mooring and anchor chains  
Variety of sizes and weight available  
Supplied as an ex-stock item

AL JAZEERAH MARINE

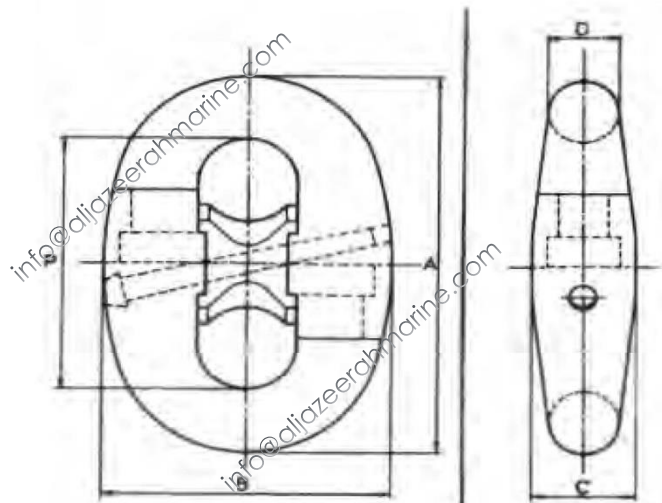

# KANTER SHACKLE

The kenter shackle comprises of two separate halves which are joined together with a center chock and secure taper pin, which locks to the halves together. Kanters are used to join together majority of chains and typically in the marine industry they are used to join together anchor and mooring chains.

Dismantling the kenter joining shackle for re-use is straightforward. Simplify use a punch to drive out the taper pin, this will dislodge the lead pellet which holds the pin in place. Then tap the center chock away and the two halves will disassemble.

**AL JAZEERAH MARINE** supplies a wide range of Kenter Shackles to variety of sizes.

Dia (mm)	Dimensions (mm)					Weight (Kg)
